

HEART DISEASE

INDICATORS

- High Blood Pressure
- Smoking
- Diabetes
- High Obesity and low Physical Activity
- Consumption of Alcohol (high)

According to the CDC, heart disease is a leading cause of death for people of most races in the U.S. (African Americans, American Indians and Alaska Natives, and whites). About half of all Americans (47%) have at least 1 of 3 major risk factors for heart disease: high blood pressure, high cholesterol, and smoking.
